About me

DeFi specialist and web developer with **over four years of experience** building and scaling Web3 applications and financial systems in production environments.

Specialized in backend, infrastructure, and off-chain systems, including automation bots, data pipelines, and oracle integrations, with a strong focus on reliability, performance, and secure interaction with on-chain protocols.

Proven track record of delivering and improving financial products, optimizing system performance, and maintaining critical off-chain operations that support protocol functionality.

Certified Financial Advisor (EFA), combining strong technical execution with a deep understanding of financial products, risk, and market dynamics.

AI Assisted Development

AI-assisted development workflow focused on accelerating delivery, improving code quality, and increasing engineering efficiency across projects.

Regularly leverages AI tools (e.g. Claude Code, Cursor) to generate production-ready code, streamline debugging and testing, and significantly reduce development time for new features.

Proven ability to enhance development workflows and deliver faster iterations without compromising reliability or maintainability.

Capable of integrating AI-driven solutions (e.g. conversational interfaces, knowledge systems) into applications to improve user experience and enable intelligent automation.

Education

• Physics degree	UNED	2025 - Present
• Financial Advisor EFA	TBS - Renta4	2026
• B2 First Cambridge	Kelington Institute	2024 - 2025
• Intensive Training in Web and Mobile Development	Codenotch	2020 - 2021
• Web Development Program (UK on remote)	Student Finance	2020 - 2020

Core Competencies

- **Financial Systems & Backend Engineering** : design and development scalable financial systems and off-chain infrastructure using Node.js, Express, and NestJS. Strong focus on implementing complex financial logic, building reliable backend services, and supporting high-frequency protocol operations in production environments.

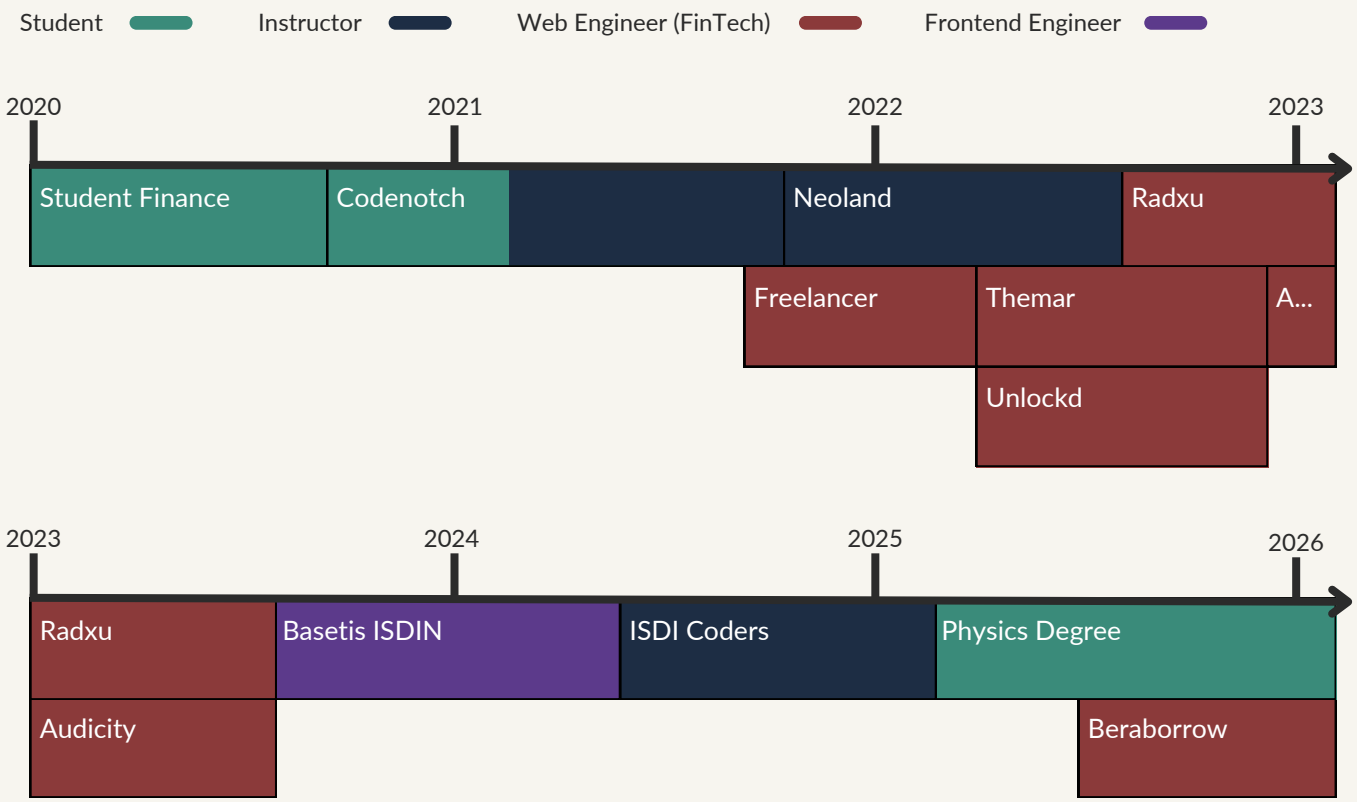
- **Off-Chain Infrastructure & Automation:** experience building and maintaining automation bots, data pipelines, and backend services to support protocol operations, including liquidations, rebalancing, and data synchronization. Focus on performance, fault tolerance, and system reliability.

- **Frontend & Data Interfaces:** development responsive and data-intensive interfaces using Next.js, React and TypeScript, enabling real-time interaction with financial systems and on-chain data.

- **Web3 Integration:** proficient in integrating blockchain protocols using tools such as Ethers.js, Viem, Wagmi and TheGraph, ensuring efficient and secure interaction between off-chain systems and smart contracts.

- **Infrastructure, Tooling & Quality:** experience with Docker, cloud environments, and CI/CD pipelines. Strong focus on maintainable code, testing (Jest, Mocha), monitoring (Sentry, Mixpanel), and debugging in production systems.

Relevant activity timeline



Experience

- **Frontend Egnineer** at Beraborrow London, England - full remote Jun 2025 - Present

Focused on improving and scaling user-facing financial features in a DeFi protocol environment. Worked on key frontend functionalities including deposits, withdrawals, dashboards, staking interfaces, swaps, charts, and transaction flows, improving UI stability and reliability through state management refactoring.
Contributed to backend and API improvements by implementing caching, validation, and data sanitization layers to ensure more robust and reliable system interactions. Participated in the development of a white-label version of the protocol for YariFi, adapting frontend, API, SDK, and subgraph components for multi-brand deployment and improving event indexing performance for better data consistency.
Supported the development of automation systems for protocol operations such as interest collection, liquidations, and liquidity rebalancing, and contributed to the design of a new vault product focused on yield generation and capital efficiency.

- **Main Teacher** at ISDI Coders Spain, Barcelona - full remote Jul 2024 - Jan 2025

Led small-group training sessions in full-stack development using the MERN stack in a remote environment, focusing on practical application of real-world engineering practices.
Designed and delivered structured learning materials, including exercises and technical guides, to support skill development and transition into junior developer roles.
Emphasized hands-on development, code quality, and applied engineering workflows to build technical confidence and production-oriented thinking.

- **Frontend Engineer** at Basetis Spain, Barcelona - full remote Ago 2023 - May 2024

Frontend Engineer in a multidisciplinary team developing a digital product in the health and skincare sector (ISDIN). Worked on identifying and resolving issues between internal systems and third-party integrations, ensuring consistent data flow and reliable application behavior.
Focused on maintaining and improving frontend functionality within a complex enterprise environment, contributing to stable user experiences and continuous product evolution.
Collaborated in Agile/SCRUM team, supporting cross-functional coordination to deliver a consistent and reliable product in production.

- **Frontend Engineer** at Audicity United States, Wyoming - full remote Oct 2022 - Apr 2023

Frontend Engineer in a fast-paced startup environment, responsible for developing and maintaining marketing websites and content-driven applications using React and Sanity CMS, based on external designs. Focused on delivering high-quality, user-friendly interfaces, ensuring smooth backend integrations, and maintaining production stability through monitoring and continuous improvements. Collaborated in code reviews and cross-functional development workflows, contributing to rapid iteration and reliable delivery of frontend features in production environments.

- **Frontend Engineer** at Radxu United States, Wyoming - full remote Jul 2022 - Jun 2023

Frontend Engineer (UX-focused) for a FinTech investment platform (https://app.radxu.org) built on EVM infrastructure. Led system development of the application, focusing on improving user experience, interface reliability, and product stability during its early-stage growth.
Implemented real-time error monitoring with Sentry and contributed to continuous technical improvements to enhance platform reliability and user flows in a production environment.

- **Frontend Lead** at Unlockd Spain, Barcelona - full remote May 2022 - Oct 2022

As Frontend Development Lead for https://app.unlockd.finance/ and developer of the NFT incubator https://the-lockeys.unlockd.finance/, I was part of a young and agile 14-person team in a fast-moving startup environment. I led frontend architecture, organized Scrum sprints, created technical documentation, and streamlined collaboration between frontend, backend, and design teams. The dApp was built with a modern Web3 stack based on the MERN architecture and deployed on an EVM-compatible blockchain.

- **Frontend Lead** at Themar Solutions Andorra - full remote May 2022 - Oct 2022

Frontend Development Lead for a FinTech financial application (https://app.unlockd.finance/) and NFT incubator platform (https://the-lockeys.unlockd.finance/), within a 14-person startup team. Led frontend architecture, defined technical standards, and organized Agile delivery processes to ensure scalable and maintainable product development. Acted as the main coordination point between frontend, backend, and design teams, driving consistent delivery in a production system built on a MERN-based stack and EVM infrastructure.

- **Freelance Developer** Spain, Barcelona - full remote Oct 2021 - Mar 2022

I developed frontend features using React, Angular, and Ionic, while also handling backend tasks with Express. I created and maintained landing pages with WordPress and Webflow, and developed e-commerce websites on the Shopify platform. Additionally, I designed email templates for MailChimp using MJML and Maizzle to support marketing communications.

- **Technical Teacher** at Neoland Spain, Barcelona - hybrid Oct 2021 - Jul 2022
- **Technical Teacher** at Codenotch Spain, Madrid - hybrid May 2021 - Oct 2021

As a Web Programming Technical Support Teacher, I assisted small groups of students focusing on the MERN stack. I created supporting materials such as study guides and video tutorials designed to build student confidence and encourage real-world application of skills. My primary goal was to equip aspiring junior developers with the practical knowledge and experience needed to launch their careers.
