## About me

**Frontend Engineer with over four years of experience** building scalable, high-performance web applications.

Specialized in developing reusable component architectures and delivering reliable user experiences through complex API integrations, including third-party and partner systems, as well as real-time, data-intensive interfaces.

Strong background working in cross-functional Agile teams within financial and data-driven environments, driving measurable improvements in performance, system reliability, and user experience across production applications.

## AI Assisted Development

AI-assisted development workflow focused on accelerating delivery, improving code quality, and increasing engineering efficiency across projects.

Regularly leverages AI tools (e.g. Claude Code, Cursor) to generate production-ready code, streamline debugging and testing, and significantly reduce development time for new features.

Proven ability to enhance development workflows and deliver faster iterations without compromising reliability or maintainability.

Capable of integrating AI-driven solutions (e.g. conversational interfaces, knowledge systems) into applications to improve user experience and enable intelligent automation.

# Education

| | | |
|---|---|---|
| • Physics degree | UNED | 2025 - Present |
| • Financial Advisor EFA | TBS - Renta4 | 2026 |
| • B2 First Cambridge | Kelington Institute | 2024 - 2025 |
| • Intensive Training in Web and Mobile Development | Codenotch | 2020 - 2021 |
| • Web Development Program (UK on remote) | Student Finance | 2020 - 2020 |

# Core Competencies

- **Frontend Engineering:** React, TypeScript, Next.js. Experience building scalable, high-performance web applications with a focus on component architecture, state management, and real-time data handling.

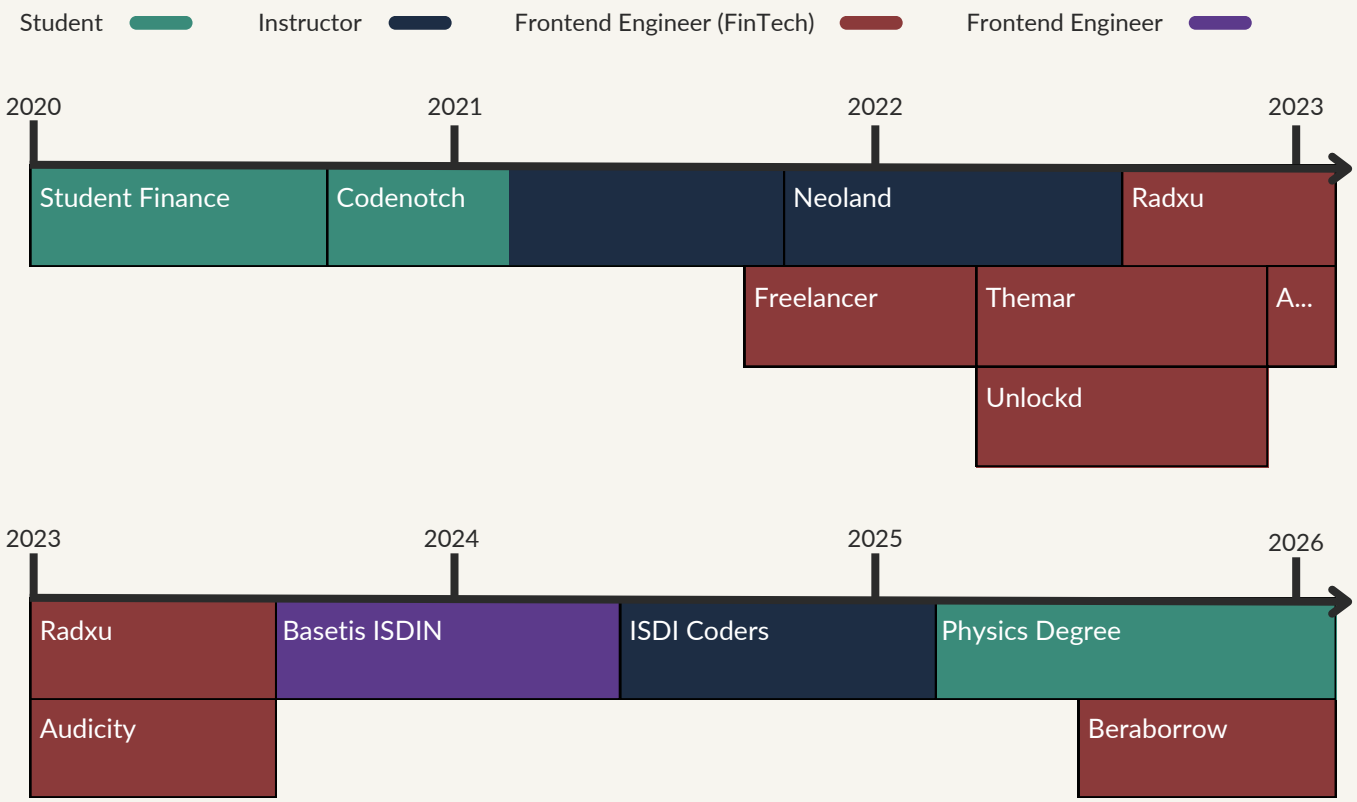
- **API Integration & Data Handling:** strong experience integrating complex APIs (REST, GraphQL), including third-party and partner systems, ensuring reliable data flows in production environments.

- **UI/UX & Product Development:** develop responsive and accessible user interfaces using Tailwind CSS, Material UI, SASS, and modern styling solutions. Focus on usability, performance, and design consistency.

- **Testing, Quality & Performance:** experience with testing and debugging tools, with a strong focus on code quality, maintainability, and performance optimization.

- **Tools & Workflow:** Git, Agile methodologies (Scrum), CI/CD pipelines, and collaboration with cross-functional teams in production environments.

# Relevant activity timeline



# Experience

- **Frontend Engineer** at Beraborrow London, England - full remote Jun 2025 - Present

Focused on improving and scaling user-facing financial features in a DeFi protocol environment. Worked on key frontend functionalities including deposits, withdrawals, dashboards, staking interfaces, swaps, charts, and transaction flows, improving UI stability and reliability through state management refactoring.
Contributed to backend and API improvements by implementing caching, validation, and data sanitization layers to ensure more robust and reliable system interactions. Participated in the development of a white-label version of the protocol for YariFi, adapting frontend, API, SDK, and subgraph components for multi-brand deployment and improving event indexing performance for better data consistency.
Supported the development of automation systems for protocol operations such as interest collection, liquidations, and liquidity rebalancing, and contributed to the design of a new vault product focused on yield generation and capital efficiency.

- **Main Teacher** at ISDI Coders Spain, Barcelona - full remote Jul 2024 - Jan 2025

Led small-group training sessions in full-stack development using the MERN stack in a remote environment, focusing on practical application of real-world engineering practices.
Designed and delivered structured learning materials, including exercises and technical guides, to support skill development and transition into junior developer roles.
Emphasized hands-on development, code quality, and applied engineering workflows to build technical confidence and production-oriented thinking.

- **Fronend Engineer** at Basetis Spain, Barcelona - full remote Ago 2023 - May 2024

Frontend Engineer in a multidisciplinary team developing a digital product in the health and skincare sector (ISDIN). Worked on identifying and resolving issues between internal systems and third-party integrations, ensuring consistent data flow and reliable application behavior.
Focused on maintaining and improving frontend functionality within a complex enterprise environment, contributing to stable user experiences and continuous product evolution.
Collaborated in Agile/SCRUM team, supporting cross-functional coordination to deliver a consistent and reliable product in production.

- **Frontend Engineer** at Audicity United States, Wyoming - full remote Oct 2022 - Apr 2023

Frontend Engineer in a fast-paced startup environment, responsible for developing and maintaining marketing websites and content-driven applications using React and Sanity CMS, based on external designs. Focused on delivering high-quality, user-friendly interfaces, ensuring smooth backend integrations, and maintaining production stability through monitoring and continuous improvements. Collaborated in code reviews and cross-functional development workflows, contributing to rapid iteration and reliable delivery of frontend features in production environments.

- **Frontend Engineer** at Radxu United States, Wyoming - full remote Jul 2022 - Jun 2023

Frontend Engineer (UX-focused) for a FinTech investment platform (https://app.radxu.org) built on EVM infrastructure. Led system development of the application, focusing on improving user experience, interface reliability, and product stability during its early-stage growth.
Implemented real-time error monitoring with Sentry and contributed to continuous technical improvements to enhance platform reliability and user flows in a production environment.

- **Frontend Lead** at Unlockd Spain, Barcelona - full remote May 2022 - Oct 2022

Frontend Development Lead for a FinTech financial application (https://app.unlockd.finance/) and NFT incubator platform (https://the-lockeys.unlockd.finance/), within a 14-person startup team. Led frontend architecture, defined technical standards, and organized Agile delivery processes to ensure scalable and maintainable product development. Acted as the main coordination point between frontend, backend, and design teams, driving consistent delivery in a production system built on a MERN-based stack and EVM infrastructure.

- **Frontend Lead** at Themar Solutions Andorra - full remote May 2022 - Oct 2022

Led recruitment and technical interviews to identify and hire developers, helping build and scale engineering teams for client projects. Worked closely with clients to define platform requirements and translate them into development plans, ensuring alignment between business goals and execution. Supervised developer output across multiple projects, ensuring quality and delivery standards, while also supporting the setup and growth of teams for clients that raised significant funding and required rapid scaling.

- **Freelance Engineer** Spain, Barcelona - full remote Oct 2021 - Mar 2022

I developed frontend features using React, Angular, and Ionic, while also handling backend tasks with Express. I created and maintained landing pages with WordPress and Webflow, and developed e-commerce websites on the Shopify platform. Additionally, I designed email templates for MailChimp using MJML and Maizzle to support marketing communications.

- **Technical Teacher** at Neoland Spain, Barcelona - hybrid Oct 2021 - Jul 2022
- **Technical Teacher** at Codenotch Spain, Madrid - hybrid May 2021 - Oct 2021

As a Web Programming Technical Support, I assisted small groups of students focusing on the MERN stack. I created supporting materials such as study guides and video tutorials designed to build student confidence and encourage real-world application of skills. My primary goal was to equip aspiring junior developers with the practical knowledge and experience needed to launch their careers.
